

Enhance Your Operational Efficiency With The Right Construction Tool

Protect your investment with the right construction technology.
An **Industry Game** Changer.

Introduction

The construction industry is an important contributor to the Australian economy, generating approximately \$472.3 billion in revenue annually and employing over one million people.

However, there are many pain points faced by construction companies that challenge growth, productivity and profitability. Factors like project delays, price increases on materials and inefficient work practices continue to negatively impact the ROI on projects.

Innovative construction tools are needed to tackle these problems. But what one tool can increase productivity and efficiency, all while reducing costs and promising a high ROI?

The SuperDeck® Retractable Loading Platform System – The Construction Industry’s most efficient material handling solution!

Read on to understand why investing in the right tools for your job is a fruitful endeavor guaranteed to increase productivity, and to keep material handling costs low.

This guide is to help owner-developers like you understand potential financial risks associated with construction. It explores how construction tools can alleviate the pressures faced today and in the future.

Let's arm you with the confidence to make the best decisions for your business.

Construction Industry Statistics

The construction industry contributes over \$472.3 billion dollars to the Australian economy.

Pricing in constructions remains generally unsettled with no clear trends with either product pricing brought down to acceptable levels or increasing to set up for the year ahead.

Over the next five years, the Construction in Australia market is expected to decline.

Traditional outriggers can cause costly delays, taking up to 45 minutes to install, relocate and remove.

Labour costs have increased in the last 12 months by 2.9%.

Common Pain Points Faced by Construction Companies

Rising Project Expenses: Rising costs continue to impede the growth of construction companies. Supply chain disruptions, inflation, high prices for raw materials, and the surge in electricity and oil prices has resulted in a continual upward trend in the cost of construction projects. This has led to lower returns on investment and higher rates of insolvency.

Poor Productivity: Labour-productivity growth in construction has decreased over the past three decades. Increasing productivity would increase construction revenue by \$56 billion in Construction annually. However, material handling inefficiencies have resulted in delayed project timelines.

Skilled Labour Shortage: Skilled labour shortage is an issue primarily driven by two factors: declining apprenticeship numbers and an aging workforce. An imbalance of available workforce and labour demands has led to delayed timelines, incurred penalties and reduced profits.

Outdated Installation Methods: Traditional outriggers can cause costly delays due to their outdated installation method. It takes upwards of 45 minutes to install, relocate, or remove fixed decks, due to the required minimum of six re-shore props and the fact that they cannot be bolted down. This timely installation method negatively impacts productivity on site.

What is the Industry Game Changer?

Preston Hire's SuperDeck® Retractable Loading Platform System is an innovative, retractable loading platform system used for material handling on construction sites. Utilised as a drawer-like system to quicken the material handling process, SuperDecks are able to be stacked vertically, one above the other, making them suited for single AND multi-story construction projects.

Able to be stacked vertically, SuperDecks are retractable and can be used as a drawer-like system.

Used to quicken the material handling process, producing an efficient and safe workflow.

Installed vertically in as little as 15 minutes, using a two prop method or a bolt down method.

What Can This System Do For You?

Features

- Can stack vertically
- Able to be installed on any building profile
- Retractable
- Fast installation, relocation and removal
- Can hold up to 5000kgs

Advantages

- Quickens the material handling process
- Suited for all building projects
- Rolls in and out to receive and deliver loads
- Reduces labour hours and workers needed
- Holds a large amount of weight

How a Planned System Can Help

The SuperDeck Retractable Loading Platform is tailored to suit any project:

It can be installed and relocated within 15 minutes, uses a two prop method, and can be bolted down as compared to traditional outriggers, **boosting productivity**.

It eliminates the need for extra human resources as it requires only one operator and no need for carrying materials to inaccessible levels, **saving labour costs**.

Retractable and stacked vertically as a drawer-like system, this innovative tool has been proven to quicken the material handling process, **improving efficiency**.
